Spare Parts for Classic British Cars

The cat is back

In 1996, after over 20 years of successful production of the XJS, Jaguar launched the result of Project X100 - the XK8. Based on the XJS floorpan, Geoff Nicholson and his team designed a more curvaceous and aerodynamic Grand Tourer harking back in style to the E-Type and XJ220. The power unit was Jaguar's first production V8. 4 Litres of capacity in aluminium giving 290 bhp. The German ZF 5 speed automatic gearbox was fitted along with new front and rear suspension and an optional electrically controlled adaptive damping system - CATS. ABS and PAS were standard and from 1998 automatic headlamp switching, auto-dipping rear view mirror and a security immobiliser were included. The car was available in coupe and convertible versions and with a choice of classic walnut and leather or sporty dark maple and half-leather trim.

In 1998 the XKR supercharged version was introduced giving 370 bhp from the 4-litre engine. There were also external changes, notably a mesh front grill, bonnet vents and rear spoiler.

In 2000 Adaptive cruise control, integrated Sat Nav and an upgraded audio system were introduced along with electric seat belt tensioning. In 2001 styling changes were made to the front nose, front and rear lighting, rear bumper skirt and larger diameter exhaust tail pipes. Interior changes included side air bags and new seating with adjustable head-rests. The XKR range benefited from larger ventilated disc brakes and Xenon headlights.

The first of a series of Special Edition XKR models was introduced. The Silverstone celebrated Jaguar's return to F1. The limited run of 107 of the Platinum Silver cars for the UK market, was quickly sold out. A second phase of 456 vehicles for the US and Japanese markets, was equally successful.

Jaguar's Special Vehicles Operation department produced their enhanced version of the XKR designated the XKR-R. Significant improvements were introduced across the range of supercharged and normally aspirated vehicles. The larger 4.2 litre engine was fitted with the new ZF 6 speed automatic box. At this point the XKR range benefitted from larger ventilated disc brakes and Xenon headlights. To mark the centenary of Sir William Lyons, the founder of Jaguar, the limited edition of 500 XKR-100 vehicles based on the XKR-R was produced. These vehicles had an anthracite paint finish, 20 inch wheels, Brembro brakes, Recaro seats and exclusive interior and exterior trim features.

In 2004 a limited edition of 200 Portfolio models was produced, mainly for the US with some sales in France. Half were finished in red and the other half in blue. All had 20 inch wheels and Recaro seats.

In 2005 various styling alterations were made and what were to be the final production models were introduced as special editions - XKR 4.2S for the European market and XKR-Victory for the US market.

On May 27th 2005 the last of 90,616 XKs based on the 1996 X100 design was produced at Browns Lane. In September 2005 the new Jaguar XK - Project X150 was unveiled at the Frankfurt Motor Show. The project was under the control of Jaguar Design Director Ian Callum whose design CV included the Aston Martin DB9 and Vanquish models. Indeed there are definite similarities in the new XK to the Astons. Very little apart from a 300 bhp version of the 4.2 engine survived from the old XK models though the front grill still evokes the E-Type style.

The bodywork was an aluminium monocoque design as used on the XJ series. Gear changes to the new Jaguar 6 speed sequential box could be made using steering wheel paddles. 0 to 60 was achieved in 5.9 seconds. Interior quality was maintained with stitched leather and a choice of Aluminium, Walnut or wood finishes. The in-car entertainment was high-end with integral Bluetooth facilities. Jaguar were proud of their installed feature for the protection of pedestrians colliding with the front of the vehicle. Such an event triggered the 'popping up' of the bonnet so that it cushioned the pedestrian from hitting the engine block through the bonnet skin - a similar principle to the air bag.

Initial production models of the new XK were normally aspirated. In November 2007 the supercharged XKR version was launched producing 420 bhp giving 0-60 in 5 seconds and a limited top speed of 155 mph.

The XKR Portfolio Limited Edition was produced in 2007 and the XKR-S (200 units) was launched at the Geneva Motor Show in 2008. These were the result of a cooperation between Jaguar Special Vehicles and British Competition Brake specialist - Alcon. Naturally the main technical features were the 400 mm diameter front discs and 350mm diameter rear discs. All discs were radially ventilated to reduce fade and give maximum cooling with grooved friction surfaces for water expulsion. The distinctive red callipers had 6 cylinders at the front and 4 at the rear. The system had been exhaustively tested throughout Europe and in particular at the Nurburgring in Germany. The XKR-S now had a top speed limited to 174 mph.

The 60th anniversary of the Jaguar XK120 was marked by the special edition XK60 in 2008. Various exclusive changes were made to the wheels and body styling.

In 2009 the 5-litre engine was introduced across the range giving 380 bhp normally aspirated and 503 bhp in the supercharged versions. In this year the XKR Goodwood Special was unveiled as a prototype at the Goodwood Festival of Speed.

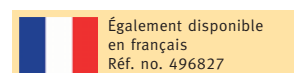

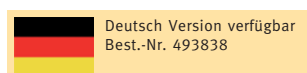

In 2010 the XKR 75th Anniversary Edition was introduced at the Goodwood Festival of Speed. Only 75 units were produced. The enhanced performance gave 0-60 in 4.4 seconds and the limited top speed of 174 mph.

At the 2010 Geneva Motor Show the two special options - Speed Pack and Black Pack were unveiled. The names are self-explanatory. The Speed Pack was available separately but the only other option was the combined Speed and Black Pack. The result was the fastest XK produced. In 2011 the XKR E-Type 50th Anniversary Edition was produced with production limited to 25 units.

In 2011 the Instant Tyre Repair system was introduced thus making the spare wheel well available for a purpose designed accessory suitcase.

Production of the XK continues.

Online price list

This catalogue is also available on the internet, with a convenient online order function. Due to the very large number of parts described in this catalogue it was not possible to include a printed pricelist. Our prices can be viewed online and are updated frequently. Please use the internet for further information and for reference. We are happy to assist you, if you have questions: Just call, fax or send an email.

General certification (ABE)

Please note for all repair and conversion work on a motor vehicle, the statutory provisions relating to road safety and operating permits pertain. We offer in our catalog, parts that are not approved for road transport and may only be installed in vehicles that are used on the racetrack. In addition, the tax and insurance-related treatment depends on a vehicle being in its original state. An article listed here does not necessarily have a general operating permit. Depending on the type of part the comparison to the original factory version is important. If in doubt please contact the competent licensing authority or any government-approved testing agencies like the German TUV or DEKRA).

2005	First XK8 in January 2005	A44678	
2005	The 4.2-S Edition was unveiled at Geneva on 1 March 2005. This was the last XK to be rolled out that was based upon the original 1996 design. Features for the 4.2-S included new exterior and interior colours and two distinct veneer options for the instrument panel, polished door threshold plates with chequered-flag emblems and embossed, leather-edged floor mats. The revised white Jaguar badge on the bonnet also feature chequered accents. New 19" Atlas wheels plus cross-drilled Brembo brake discs, red wheel badges and red brake callipers were also fitted	unknown	
2005	The first generation XK8 and XKR models were discontinued in May. In total 90.616 cars were produced at Browns lane plant	A48684	
2006	The New XK (project code X150) was launched in March 2006. The replacement models bore a „rough“ resemblance to the previous cars but the only carryover aspects were the 4.2 litre engine and gearbox. The bodywork was all new, now produced in lightweight aluminium featuring for the first time on a Jaguar what they called „signature“ vertical vents in the front wings. There was also a re-designed interior with the option of different wood or alloy treatment and updated equipment levels. Front and rear suspensions were also new	B00379	
2006	The New XK was joined by the XKR supercharged versions, now producing 420 bhp. Again with a mesh grille, bonnet vents, new badging, a new style front bumper area, four exhaust tailpipes and an alloy finish to the side „signature“ vents. Internally revised trim and seating identified the XKR models. An optional XKR-S version was launched with new 20" forged alloy wheels, a cross-drilled Alcon braking system with 400 mm diameter front and 350 mm rear discs, 6-piston front callipers and 4-piston rear callipers. Also the suspension was recalibrated. All production of this model was only sold into European markets	B11079	
2007	Updated Supercharged drive belt idlers and pulleys	B17759	
2007	Jaguar launched in mid-year a new 3.5 litre V8 engine with 262 bhp output	B19991	
2009	Last XK with 3.5 and 4.2 engines	B32752	
2009	Jaguar launched the 2010 Model Year facelift versions of the second generation XK and XKR. The cars feature a new 5.0 litre V8 engine developing 385 bhp in normally aspirated form and 510 bhp supercharged. Enhanced steering and braking systems were incorporated along with the fitting of the JaguarDrive control for ZF automatic transmission. Three models were now available in both convertible and coupe form, the XK, XKR and Portfolio (XK models with an enhanced specification)	B32753	
2010	First XK in 2011 Model Year	B38854	
2011	First XK in 2012 Model Year. The new XK distinguished by a more aggressive looking front bumper, re-profiled side skirts, additional air vents on the hood and bumpers, a large rear wing and a redesigned rear bumper housing a diffuser and quad tail pipes. Introduction of new XKR-S at the Geneva Motor show which comes with an uprated supercharged V8 engine, overhauled suspension and new aerodynamic enhancements	B44939

24. TIMING CHAIN KIT

complete engine set

XK8 4.0 to engine no. 0108122359

Part no. 492434

As a result of problematic timing chain tensioner design and other factors like engine overheating or poor maintenance, the plastic cam chain tensioners on 1997 to 2002 V8 Jaguars began to experience stress fractures, and so did some of the plastic guides. While the cars were under warranty, many tensioners were replaced by Jaguar service departments with improved components. Engines subject to this problem include XK8 / XKR engines with the last six digits of their VIN numbers between 001001 and A24195. In the 2002 model year Jaguar began installing upgraded plastic tensioners. These second-generation units are, to the best of our knowledge, more reliable than the early version.

26. CASTROL FULL SYNTHETIC OIL

Edge SAE 0W/30

XK8 4.0 and 4.2 including Supercharged to VIN...A48684, XK8 3.5 and 4.2 except Supercharged from VIN...Boo379 to B32752
5 litre canister Part no. 495413

Product features:

- Best oil for modern high performance engines
- Lower fuel consumption
- Fully synthetic technology

Product benefits:

- Improves engine performance even through extended service intervals
- Easier to start in all weather
- Protects from the moment you start the engine
- Improves acceleration
- Reduces fuel consumption leading to lower running costs
- Reduces engine wear – peace of mind against breakdown

Technical specifications and approvals:

- ACEA A3/B3, A3/B4
- API SM/CF
- BMW Longlife-01
- GM-LL-A-025, GM-LL-B-025
- MB-Approved 229.3, MB-Approved 229.5
- VW 502 00 / 503 01 / 505 00

27. CASTROL FULL SYNTHETIC OIL

Magnatec SAE 5W/30 C3

XK8 4.2 Supercharged from VIN...Boo379 to B32752
5 litre canister Part no. 472241

Castrol Magnatec 5W-30 A3/B4 intelligent molecules cling to critical engine parts to provide an extra layer of protection. With up to 75% of engine wear happening whilst your engine's warming up, Castrol Magnatec's molecules are always there, always ready, drastically reducing* engine wear during this critical start-up and warm-up period.

Castrol Magnatec 5W-30 A3/B4 combining Intelligent Molecules and fully synthetic technology: Clings to your engine forming an extra layer that protects during warm-up and beyond Bonds to metal surfaces making engine parts more resistant to wear

Combine with synthetic technology to provide increased protection in high and low temperature applications

Provide continuous protection for all driving conditions, styles and temperatures

Provides superior performance under extreme cold start up conditions.

Technical specifications and approvals:

- API SM/CF
- ACEA A3/B3, A3/B4, C3
- GM-LL-A-025
- GM-LL-B-025
- BMW approval Longlife-01
- MB approval 229.31
- RENAULT approval RNo700
- VW approval 502 00 u. 505 00
- FIAT approval 9.55535-G1

28. CASTROL FULL SYNTHETIC OIL

Edge SAE 5W/20

XK8 5.0 including Supercharged from VIN...B32753
5 litre canister Part no. 495654

Castrol was the first major oil brand to offer a full synthetic 5W-20 that is specifically formulated to meet the needs of Jaguar, Land Rover, Ford, Chrysler, Honda and Toyota 5W-20 service. EDGE 5W-20 provides excellent cold weather performance and exceeds the stringent performance, fuel economy and fuel economy retention requirements of the ILSAC GF-4 specification. EDGE 5W-20 meets the needs of Ford, Honda, Toyota, Chrysler, Dodge, Hyundai and other vehicles where 5W-20 is recommended. EDGE 5W-20 also exceeds all the requirements of ILSAC GF-4 and GF-3 for API Certified Gasoline Engine Oils.

Technical specifications and approvals:

- ACEA A1/B1
- API SL
- Meets Ford WSS-M2C925-A and Ford WSS-M2C925-B
- Meets engine test requirements of A5/B5
- ILSAC GF-3

These so-called stretch bolts are specifically de-signed to give a set length under the right torque. As such they should never be used a second time. The desired bias requires careful installation. The cylinder head bolts are assembled in several stages with a specific tightening torque. When this torque is reached, the bolts are turned further through a defined angle which pre-loads them into a plastic region. We recommend that new cylinder head stretch bolts be used and any work carried out to your engine is done in accordance with a factory workshop manual. Whilst you are doing this job we consider it advisable to replace the water pump and expansion cap to minimise any future problems.

Insider tip

The crankshaft sensor is an inductive type sensor. It consists of a magnet and a coil wound around the magnet. It is triggered by reference points passing the sensor tip. The reference points can be pins mounted to the flywheel in the form of a trigger disc or reluctor. These will divide the 360 degrees rotation of the engine into segments that the engine control can use for the ignition system or for the start of Injection. Each time a reference point passes the tip of the sensor it excites the magnet an ac voltage is then induced in the coil. The AC voltage is sent as a signal voltage back to the engine control unit. The crankshaft sensor or engine speed sensor will have 2 or 3 pins. The 3rd pin is used for a screen. The screen suppresses any interference. The engine management light will be triggered if the crankshaft sensor moves outside of normal operating values. A fault with this sensor may inhibit engine startup.

12. WAGNER ADDITIVE

Bactofin - fuel stabilizer, special for fuels with Bio-Ethanol (E10). Dosage: 1:1000

Modern fuels attack the metal parts of the fuel supply systems. This problem applies especially to older vehicles, while in modern cars, for good reasons, more and more plastic tanks are used. The second problem relates to biogenic fuels and mixed fuels. This problem applies to owners of all ages of cars and modern cars too. In modern fuels bacteria grow in unprecedented quantities. This produces a lot of dirt, especially when the vehicle is not in regular use. The pipes gradually get blocked and the tank becomes contaminated with dirt. Rather than the drastic measure of replacing the entire fuel supply system, regular use of Bactofin will reduce the problem considerably. For vehicles which normally operate with lead-replacement or top oil, using Bactofin is just as easy and will give owners peace of mind. Bactofin also prevents any corrosion of the fuel system. Rust is completely inhibited!

This system includes front, center and rear sport silencers. Due to the enlargement of the cross section of the tube as well as a significantly reduced exhaust back pressure, this stainless steel system offers you a power increase of approx. 15 HP. The system underscores the sportive character by means of a typical V8-sound spectrum.

Castrol Syntrox Limited Slip 75W/140 (Formerly SAF-XJ 75W/140) is a fully synthetic SAE 75W/140 hypoid gear oil formulated for use in both conventional and limited slip differentials. Whilst being suitable for all applications where a lubricant of this quality is specified it is specially formulated for use in limited slip differentials fitted to Japanese vehicles requiring an SAE 75W/140 Extreme Pressure Gear Oil. Castrol Syntrox Limited Slip 75W/140 has additionally demonstrated outstanding performance in competition vehicles employing limited slip differentials. Castrol Syntrox Limited Slip 75W/140 is also specifically designed for BMW differentials including the Z3 limited slip differential.

Benefits of Castrol Syntrox Limited Slip 75W/140:

- Excellent shear stability
- Exceptional resistance to oxidation
- Particularly effective resistance to very strong loads
- Very good low temperature fluidity properties
- Affords increased drain intervals
- Helps prevent vibrations / noise occurring in the transmission

Specifications and Manufacturer Approvals:

- API GL-5, ZF TE-ML- 05D, 12D, 16G, US claims - MIL-L-2105D, BMW Approved (for limited slip)

11. CASTROL GEAR OIL SAE 75W/140

XK8 4.0 and 4.2 to VIN...A48684

1 litre bottle Part no. 472147

Castrol Syntrox Limited Slip 75W/140 (Formerly SAF-XJ 75W/140) is a fully synthetic SAE 75W/140 hypoid gear oil formulated for use in both conventional and limited slip differentials. Whilst being suitable for all applications where a lubricant of this quality is specified it is specially formulated for use in limited slip differentials fitted to Japanese vehicles requiring an SAE 75W/140 Extreme Pressure Gear Oil. Castrol Syntrox Limited Slip 75W/140 has additionally demonstrated outstanding performance in competition vehicles employing limited slip differentials.

Castrol Syntrox Limited Slip 75W/140 is also specifically designed for BMW differentials including the Z3 limited slip differential.

Benefits of Castrol Syntrox Limited Slip 75W/140:

- Excellent shear stability
- Exceptional resistance to oxidation
- Particularly effective resistance to very strong loads
- Very good low temperature fluidity properties
- Affords increased drain intervals
- Helps prevent vibrations / noise occurring in the transmission

Specifications and Manufacturer Approvals:

- API GL-5, ZF TE-ML- 05D, 12D, 16G, US claims - MIL-L-2105D, BMW Approved (for limited slip)

Easy shunting ? ...without starting the engine

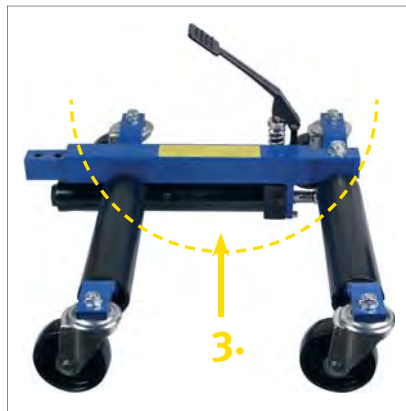

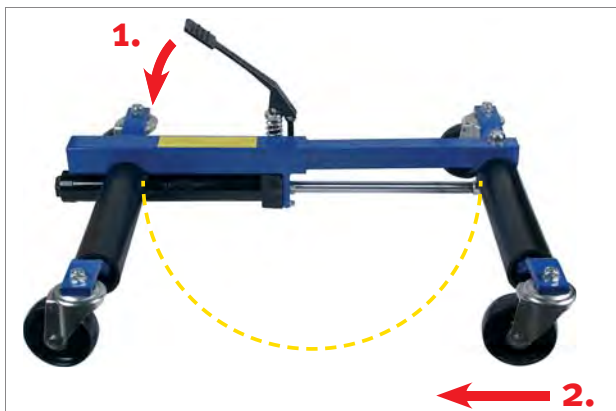

12. DOLLY

built in hydraulic provides easy lifting

- dead easy
- accurate
- ideal in confined space
- comfortable
- no need to start the engine to move th vehicle a short distance
- no sprained back pushing heavy vehicle unaided
- maximum use of space in the garage (thick foam strips on the wall prevent paint damage)
- you can even connect two cars together
- the car can be rotated through 360° on the spot

Fast and convenient lifting and moving of your vehicle. Dimensions: 880 x 620 x 305 mm. Max. load per dolly: 680 kg. Max vehicle weight: 2720 kg. The car can be rotated 360°. Solid hard rubber wheels with ball bearings. Built in hydraulic provides easy lifting.

for wheels up to 305 mm Part no. 495672
for wheels up to 330 mm Part no. 495673

1. Simple hydraulic pump to press with your foot
2. The support rails slide together
3. The vehicle will be lifted easily

Warning: the rolles are very smooth so you should back up the whole thing with wedges. Especially if the parking area is not level.

Goodridge have developed and manufactured hoses for the following high profile applications Formula 1, Thrust 2 (world land speed record holder), Nascar, every major Rally team. Because of their expertise in the hydraulics field they have been able to apply this knowledge to the automotive industry to give replacement brake hoses and fittings that outperform even the original equipment products. Goodridge kits feature the finest quality stainless steel braided hose, which improves braking performance, eliminates the spongy feel of rubber hoses and provides superior resistance to corrosion. Hose end fittings are zinc plated steel as standard or stainless steel as an option. Goodridge manufacture hose for all the major manufacturers.

React Performance DOT 4

1 litre bottle Part no. 472095

Castrol React Performance DOT 4 is a high boiling point polyglycol type brake fluid designed to provide superior braking performance in a variety of vehicles, especially those that operate at higher temperatures or under increased loads. The product has been formulated to give outstanding system protection against corrosion and high temperature vapour lock.

Castrol React Performance DOT 4 is suitable for use in all brake fluid systems in cars, motorcycles and light commercial vehicles requiring either a DOT 3, DOT 4 or Super DOT 4 product (excluding where a mineral oil based fluid is specified). Castrol React Performance DOT 4 can be used with either disc or drum brakes, including modern vehicles fitted with ABS systems. The product is also suitable for use in hydraulic clutch systems.

Product features and benefits:

1. High boiling point - exceeds US FMVSS DOT 3 and DOT 4 specification requirements, and offers a performance reserve over brake fluids with lower boiling points.
2. High vapour lock temperature - greater protection against brake fluid vaporization.
3. Corrosion protection – outstanding protection against corrosion caused by absorbed moisture, that can contribute to lower maintenance costs.
4. High temperature stability provides a greater margin for safety because product performance will not fade under higher temperatures.
5. Controlled viscosity requirements - under extremes of temperature and operating conditions, Castrol Response Super DOT 4 will maintain an optimum operating viscosity to ensure greater safety.
6. Rubber swell control - contributes to efficient operation of the braking system components.
7. Compatible with all other brake fluids that meet either DOT 3, DOT 4 or Super DOT 4 specification.

The new Aluminium Devil Special® is an acid-free, modern highly efficient wheel rim cleaner. This cleaner easily removes persistent and extreme pollution of the light metal and steel rims, chromed rims and hubcaps/decorative trims. The new acid-free formula is an absolute self-cleaner. When used properly, rim surfaces and wheel bolts are not pitted. In addition, Aluminium Devil Special® strongly protects all metals. Aluminium Devil Special® is recommended for regular cleaning of the above mentioned rims.

aspheric. Part no. 422380

**Insider tip**

The convex mirror is curved. The constant radius of curvature of the lens gives a broader field of vision but the images tend to be greatly distorted. The aspheric mirror differs from the convex mirror in that 80% of the surface is convex with a large radius of curvature while the remaining 20% of the mirror, or the outside edge, is convex where the radius of the curvature decreases dramatically. The result is that the aspheric mirror produces a less distorted image while at the same time producing a field of vision up to 65% greater than that of the convex mirror.

1. FILTERMAG FILTERMAGNET

high performance type, for oil filters from 2.90" to 3.40" diameter, height 2.625"

XK8 4.0 to VIN...A30644,
XK8 4.2 from VIN...A30645 to B32752,
XK8 3.5 from VIN...B00379 to B32752
 Part no. 481135

FilterMAG's powerful rare-earth magnets trap and hold wear-inducing metal particles smaller than 40 microns down to 1 micron that the filter cannot stop. It extends oil life and reduces maintenance costs. Easy fitting while magnetic force „snaps“ FilterMAG to the filter canister. FilterMAG has a lifetime warranty.

May replace original filter element and has the following benefits: high air flow with excellent filtration, will lead to more horsepower and better acceleration, washable and reusable.

14. EBC BRAKE PADS

front, Kevlar ,green stuff' specification

The material used in ,green stuff 2000 series' brake pads is Kevlar based. The brake pads give a strong progressive braking from low temperature up to 900°F, they are great for fast road, road sport and light race cars. Most „green stuff“ brake pads are type approved ,E' marked and meet the Reg.90 certification, this information will be found on bottom of each package. As an added bonus Kevlar based brake pads produce less brake dust than other materials and have fantastic wear life.

15. EBC BRAKE PADS

front, Ceramic ,red stuff' specification

This material is a Kevlar® fibre based brake compound enhanced with ceramic particles. Being a hard wearing pad, bed-in times can be as long as 1000 miles and drivers must be patient until the pad takes up the shape of their disc. This is a truly impressive fast road pad for repeated heavy braking. It emits far less dust than semi-metallic pads and has been proven to stop a passenger car 13 metres quicker than OEM pads from 100mph/160kph. Features EBC Brake-In surface coating which conditions disc surface and accelerates pad bed-in. Nominal friction coefficient 0.5 with approx. 50% dust reduction. Most EBC Red Ceramic pads are approved to ECE R90 brake safety regulation.

„Valve devil“

9. LIMORA VALVE GRINDER

good performance depends on properly seated valves. Badly seated or burnt valves and worn guides and stems result in hot gas escaping under compression, reducing performance and increasing engine wear. Loss of power and poor starting are some of the symptoms. The oscillating valve lapper produces gas tight seals in seconds and converts a standard rotary drill to oscillating action/grinding motion. The 22/28 mm suction heads fit most valves, an essential tool for multi-valve engines. Part no. 321353

14. GREASE GUN

new 2 handle system for 500 g cartridges, easy, mess free cartridge change, easy to gauge amount of grease remaining. Part no. 220563

15. GREASE

LZR 2 longlife grease is a new grease for roller and friction bearings, that is made from high quality basic oils by using lithium soaps as thickening agents. It shows an extraordinary oxidation resistance. LZR 2 grease is water resistant, adhesive, can be loaded with pressure and is protective against corrosion. These properties, in connection with high work resistance, very good abrasion rating and particularly strong adhesive quality, characterise this lubricant as particularly appropriate for lubrication under difficult operating conditions and at highly loaded roller and friction bearings. Practical advantages: LZR 2 can be used universally as a long-term grease. It is recommended for lubrication of vehicles, industrial machinery and for all machines and devices in the field of construction, stone and earth. Temperature range: -30° to +120°C.

17. CAR COVER

our Car covers are made from high quality materials to ensure that your quality expectations will always be met and surpassed. We use the latest generation materials, double stitching, durable securing straps and purpose made fittings. We have a wide range of cover materials available. There is a blue indoor cover available and a heavy duty grey outdoor cover. The breathable indoor dust cover is manufactured from a thick non-woven material in a royal blue colour. It is breathable and 100% UV resistant to protect paintwork and prevent colour fade and comes with elasticated hems and underbody straps for a snug fit. This type of car cover will not deposit fluff on mohair or canvas hooding material and is both machine and hand washable. The heavy duty outdoor cover comes with a soft lining to protect paintwork. It is a substantial cover weighing about 3 kg and packed in a sturdy zipped storage bag with handles. The grey coloured outer skin is soft and pliable, yet totally waterproof, and the stitched seams are heat sealed.

3. JAGUAR XK8 AND XKR

Performance Portfolio, 1996-2005. Written by R.M. Clarke, 128 pages with many illustrations, size: 270 x 200 mm, binding: paperback, language: English

Jaguar's E-Type was so good that designing and developing a successor was always going to be difficult. The XK8, released in 1996, brought renewed credibility to Jaguar Cars. It looked like a Jaguar should - sleek, low with sensuous curves in all the right places. Three years later Jaguar announced the XKR, a supercharged and honed-and-tightened version of the XK8. Various special XKs were built during its long production life and it had a 'sister' car in the lovely Aston Martin DB7 that took features from both it and the XJ-S. The XK8 remained in production until 2005 when it was replaced by the next generation that borrowed heavily from it.

5. JAGUAR XK8

The Complete Story. Written by Graham Robson, 176 pages with 146 coloured illustrations, size: 246 x 189 mm, binding: hardcover, language: English

It was code-named X100 and it was to be Jaguar's latest sports cars, featuring both coupe and convertible coachwork. It was to have an all-new V8 engine and it was to replace the XJS. It would also ultimately have the most powerful forced-induction engine of any production Jaguar road car and it had a lot riding on its success. It was the XK8 - a sleek, purposeful grand tourer in the Jaguar tradition.

Graham Robson, one-time Jaguar apprentice and a motoring historian with several other Jaguar books to his credit, tells the story of one of the twentieth century's most beautiful sports cars, from its conception to the end of the line for both it and the factory it was built in. Topics covered: Full history of the XK8 Special feature panels on key personalities and developments Full specifications of each model.

9. JAGUAR

The impressive portrait of the Jaguar marque.
Written by Bernard Viart and Serge Bellu, photos by Xavier de Nombel, 208 pages with 223 coloured and 28 b/w illustrations, size: 300 x 240 mm, binding: hardcover, language: German

The authors Viart and Bellu describe in this book the history of Jaguar. More than 100 types and 34 models are portrayed in words and pictures. They fit together to form a complete picture of the car brand.

The authors describe in great detail how each model is developed historically and how it is technically and aesthetically advanced. What proportion of the individual managers, engineers, technicians and designers had is discussed in detail. The authors also tell the often incredibly complex history of these individual vehicles. Special consideration is given to the ultimate Jaguar XK and the development of the V12 engine. The racing history of Jaguar is presented in detail.

10. JAGUAR COUPES 1932-2007

75 years of luxury and passion
Written by Matthias Pfannmüller, 176 pages with 220 coloured photos, size: 230 x 290 mm, binding: hardcover, language: German

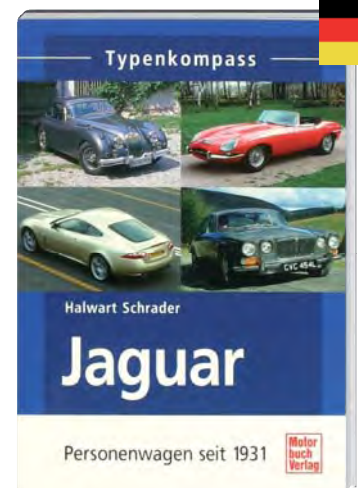

The cats from Coventry always have an excellent reputation. But the true roots of success lie in the past. This book is dedicated to the noble two-doorer and for the first time a detailed view of ten series over 8 decades. The background to the development of SSI to the current XK is analyzed, as well as technology and equipment. At the same time, the entire brand history is represented competently. Using many previously unpublished photos and insider information the reader can relive the eras of Jaguar Coupes, travelling in style through the varied models and contemporary history. Entertainingly written texts, and an elegant layout makes this book a real pleasure for Jaguar enthusiasts.

11. TYPE GUIDE

Jaguar cars since 1931
Written by Halwart Schrader, 128 pages with many photos, size: 205 x 140 mm, binding: paperback, language: German

The cats from Coventry are more successful than ever. This success was initiated by the change of the S-Type in 1996 but the roots of success lie in the distant past from the first Jaguar in 1931. Halwart Schrader has produced a comprehensive but concise treatment of the entire range of sports cars, coupes, saloons and convertibles.

XK8 4.0 and 4.2 including Supercharged to VIN...A48684, XK8 3.5 and 4.2 except Supercharged from VIN...Boo379 to B32752
5 litre canister Part no. 495413

Product features:

- Best oil for modern high performance engines
- Lower fuels consumption
- Fully synthetic technology

Product benefits:

- Improves engine performance even through extended service intervals
- Easier to start in all weather
- Protects from the moment you start the engine
- Improves acceleration
- Reduces fuel consumption leading to lower running costs
- Reduces engine wear – peace of mind against breakdown

Technical specifications and approvals:

Modern fuels attack the metal parts of the fuel supply systems. This problem applies especially to older vehicles, while in modern cars, for good reasons, more and more plastic tanks are used. The second problem relates to biogenic fuels and mixed fuels. This problem applies to owners of all ages of cars and modern cars too. In modern fuels bacteria grow in unprecedented quantities. This produces a lot of dirt, especially when the vehicle is not in regular use. The pipes gradually get blocked and the tank becomes contaminated with dirt. Rather than the drastic measure of replacing the entire fuel supply system, regular use of Bactofin will reduce the problem considerably. For vehicles which normally operate with lead-replacement or top oil, using Bactofin is just as easy and will give owners peace of mind. Bactofin also prevents any corrosion of the fuel system. Rust is completely inhibited!

Castrol Syntrox Limited Slip 75W/140 (Formerly SAF-XJ 75W/140) is a fully synthetic SAE 75W/140 hypoid gear oil formulated for use in both conventional and limited slip differentials.

Whilst being suitable for all applications where a lubricant of this quality is specified it is specially formulated for use in limited slip differentials fitted to Japanese vehicles requiring an SAE 75W/140 Extreme Pressure Gear Oil. Castrol Syntrox Limited Slip 75W/140 has additionally demonstrated outstanding performance in competition vehicles employing limited slip differentials.

Castrol Syntrox Limited Slip 75W/140 is also specifically designed for BMW differentials including the Z3 limited slip differential.

Benefits of Castrol Syntrox Limited Slip 75W/140:

- Excellent shear stability
- Exceptional resistance to oxidation
- Particularly effective resistance to very strong loads
- Very good low temperature fluidity properties
- Affords increased drain intervals

XK8 3.5 to VIN...B32752,
XK8 5.0 from VIN...B32753
 1 litre bottle Part no. 472095

Castrol React Performance DOT 4 is a high boiling point polyglycol type brake fluid designed to provide superior braking performance in a variety of vehicles, especially those that operate at higher temperatures or under increased loads. The product has been formulated to give outstanding system protection against corrosion and high temperature vapour lock.

Castrol React Performance DOT 4 is suitable for use in all brake fluid systems in cars, motorcycles and light commercial vehicles requiring either a DOT 3, DOT 4 or Super DOT 4 product (excluding where a mineral oil based fluid is specified). Castrol React Performance DOT 4 can be used with either disc or drum brakes, including modern vehicles fitted with ABS systems. The product is also suitable for use in hydraulic clutch systems.

Product features and benefits:

1. High boiling point - exceeds US FMVSS DOT 3 and DOT 4 specification requirements, and offers a performance reserve over brake fluids with lower boiling points.
2. High vapour lock temperature - greater protection against brake fluid vaporization.
3. Corrosion protection – outstanding protection against corrosion caused by absorbed moisture, that can contribute to lower maintenance costs.
4. High temperature stability provides a greater margin for safety because product performance will not fade under higher temperatures.
5. Controlled viscosity requirements - under extremes of temperature and operating conditions, Castrol Response Super DOT 4 will maintain an optimum operating viscosity to ensure greater safety.
6. Rubber swell control - contributes to efficient operation of the braking system components.
7. Compatible with all other brake fluids that meet either DOT 3, DOT 4 or Super DOT 4 specification.
